SCS

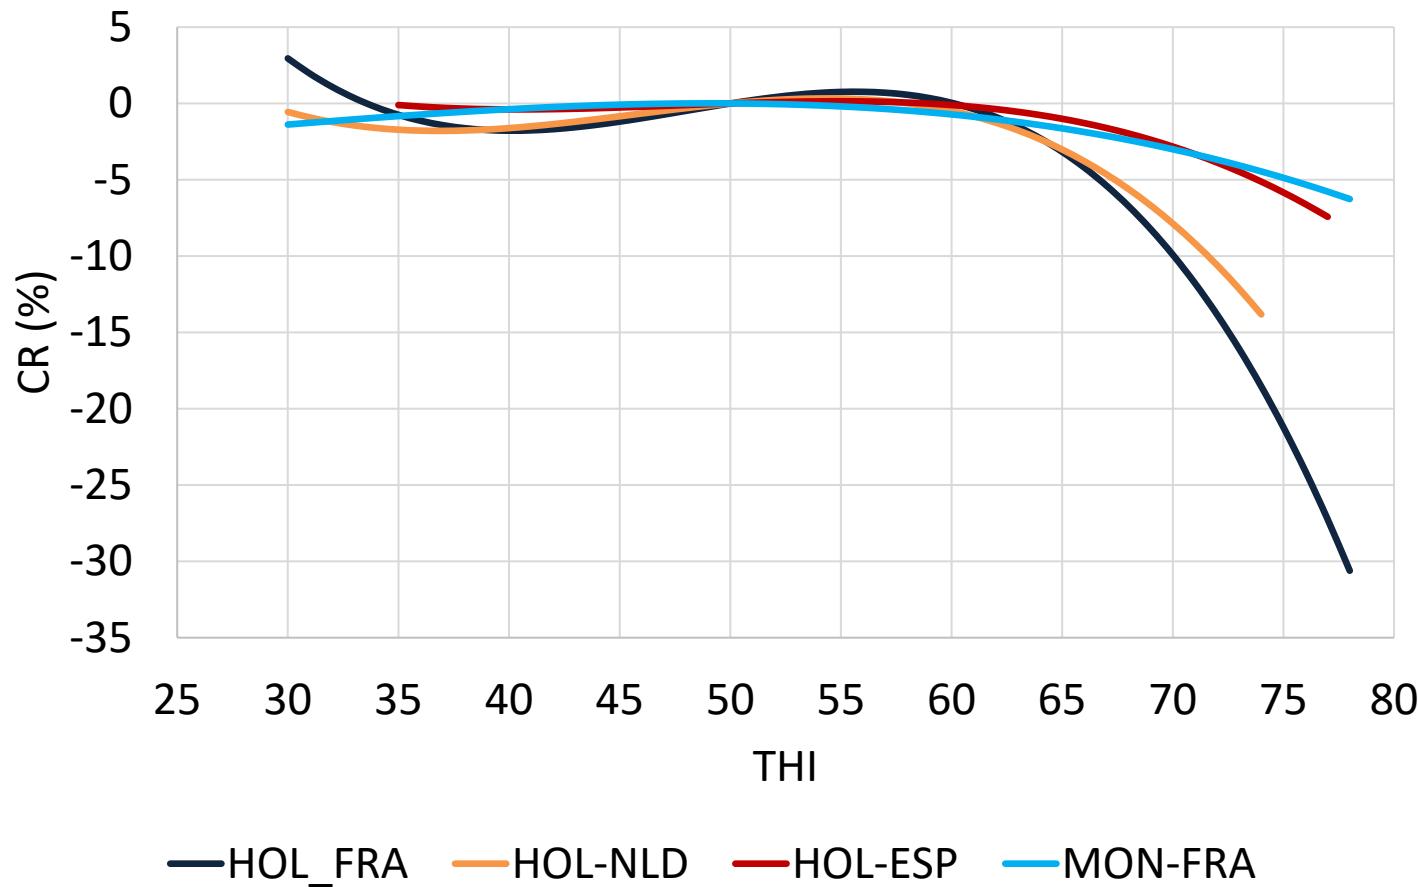

Differences in HS thresholds and subsequent slopes of decay across countries:

- HS threshold largest for SPA and smallest for FRA
- Slopes of decay tended to be largest for HOL-NLD and smallest for HOL-SPA or MON-FRA

Explain by : Acclimation, Production systems,...?

Breed-Country	Threshold (THI units)	Slope (%CR/unit THI)
HOL-FRA	63	-1,29
HOL-NLD	62	-1,04
HOL-SPA	64	-0,51
MON-FRA	61	-0,48

Differences in HS thresholds and subsequent slopes of decay across countries:

- Smaller differences in HS threshold land lower values than for production traits
- Slopes of decay tended to be largest for HOL-FRA and smallest for HOL-SPA

Explain by : Acclimation, Production systems,...?
