# Introduction

# Introduction

Individual temperament is a component of the response to stress.

JOURNAL ARTICLE

**Associations between response to handling and growth and meat quality in frequently handled *Bos taurus* beef cattle**

S. P. Turner , E. A. Navajas, J. J. Hyslop, D. W. Ross, R. I. Richardson, N. Prieto, M. Bell, M. C. Jack, R. Roehe

*Journal of Animal Science*, Volume 89, Issue 12, December 2011, Pages 4239–4248,

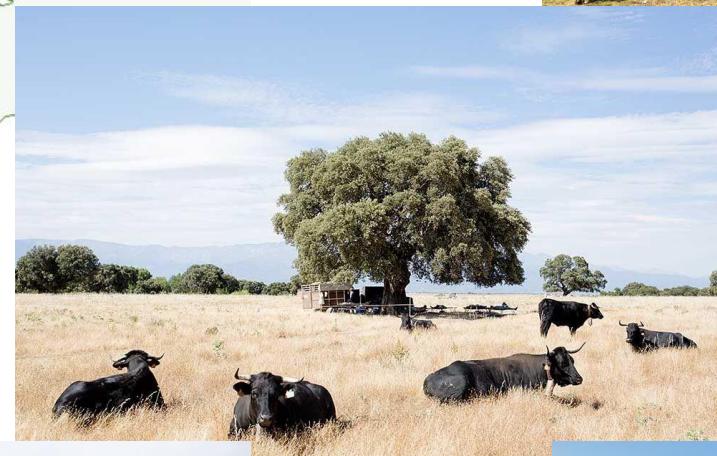

**Cortisol vs.  
Exit velocity / Flight speed  
Exit score  
Response to move  
Restraint in a crush  
Isolation in a pen with a human**

# Introduction

## Avileña-Negra Ibérica

- Local beef cattle
- Extensive production
- Meat production in feedlot

Large variability in their reactivity at the same stress event

Feedlot

Heifer scenter

# Introduction

- Temperament is a risk factor for stress.
- Temperament is a component of the “coping style” of an animal
- How could genetics contribute to improve welfare and favour its impact on health, production and reproduction?.
- How do we evaluate temperament?

# Our objectives

1. To establish a procedure to evaluate temperament in ANI calves at the Control Center for the post-weaning phase
2. To estimate the repeatability of temperament indicators

**The Final end is to characterize “Coping styles”**

# Experimental setup

- **29 Avileña-Negra Ibérica male calves** in a Control Centre under commercial conditions divided in **3 groups**
- **From 1 to 4 controls**
- **Two observers** by categorical traits

| Group      |    | G1 | G2 | G3 | Total |
|------------|----|----|----|----|-------|
| Nº animals |    | 4  | 14 | 11 |       |
| Control    | C1 | 4  | 14 | 11 | 29    |
|            | C2 |    | 14 | 11 | 25    |
|            | C3 |    | 14 | 8  | 22    |
|            | C4 |    |    | 8  | 8     |
| Total      |    | 4  | 42 | 38 | 84    |

# Material & methods

- **Behavior protocole**
- **FT flight time** (time in second to cover 1,83 m, Burrow, et al. 1988)
  - Chronometer ( C1 & C2)

- Infrared sensors (FarmTek, North Welie, TX) / C3 & C4

**Electronic Timers**  
(800) 755-6529 /  
<http://farmtek.net>  
FarmTek, Inc., Wylie, Texas

- **FS flight score**
- **RS restraint score**

# Material & methods

- **Behaviour protocole**

- FT flight time (time in second to cover 1,83 m, (Burrow, et al. 1988)

- **FS flight score in 4 categories:**

1:walk      2:trot

3:canter      4:run

- **RS restraint score:** At the weighting chute in 5 categories

1:quiet

2:slow movements

3:frequent movements with vocalization

4:constant movements, lateral displacements and vocalization.

5: violent movements, and continuos intention to leave

| Tpo (s) | Flight exit (1,83m) |   |   |   | In a crush    |               |   |   |   |
|---------|---------------------|---|---|---|---------------|---------------|---|---|---|
|         | Flight score        |   |   |   | Without move. | With movement |   |   |   |
|         | 1                   | 2 | 3 | 4 |               | 1             | 2 | 3 | 4 |
| 0,856   | x                   |   |   |   |               |               | x |   |   |
|         |                     |   |   |   |               |               |   |   |   |
|         |                     |   |   |   |               |               |   |   |   |

# Model of analysis

## Mixed model using remlf90 (Misztal,et al., 2009)

- Model:

$$FT / FS / RS = Type\_timer + \underline{Observer} + Age + Group + Animal + e$$

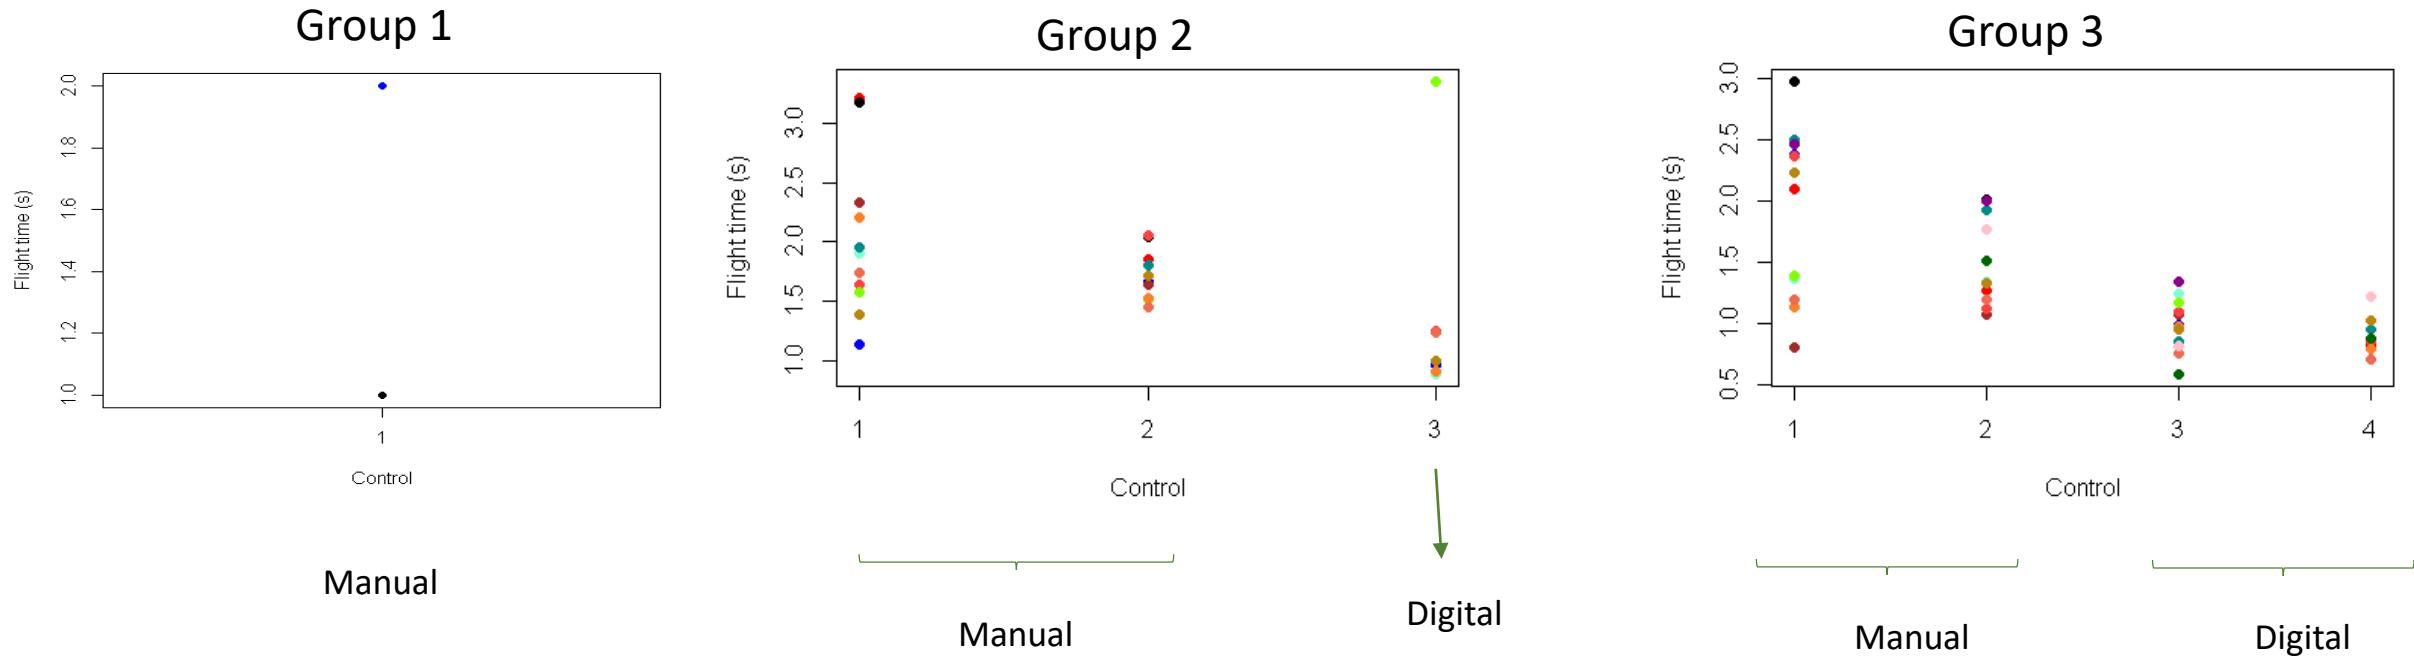

|               |
|---------------|
| Repeatability |
| correlation   |

|    | FT   | FS     | RS     |
|----|------|--------|--------|
| FT | 0,20 | -0,975 | -0,643 |
| FS |      | 0,30   | 0,553  |
| RS |      |        | 0,31   |

# Solutions

| FT | Fixed effect    |         | Solution |
|----|-----------------|---------|----------|
|    | Age             |         | -0,001   |
|    | Type_Reference  | Digital | 0,469    |
|    | Group_Reference | G1      | 0,608    |
|    |                 | G3      | 0,246    |

Manual system tend to increase flight time

# Solutions

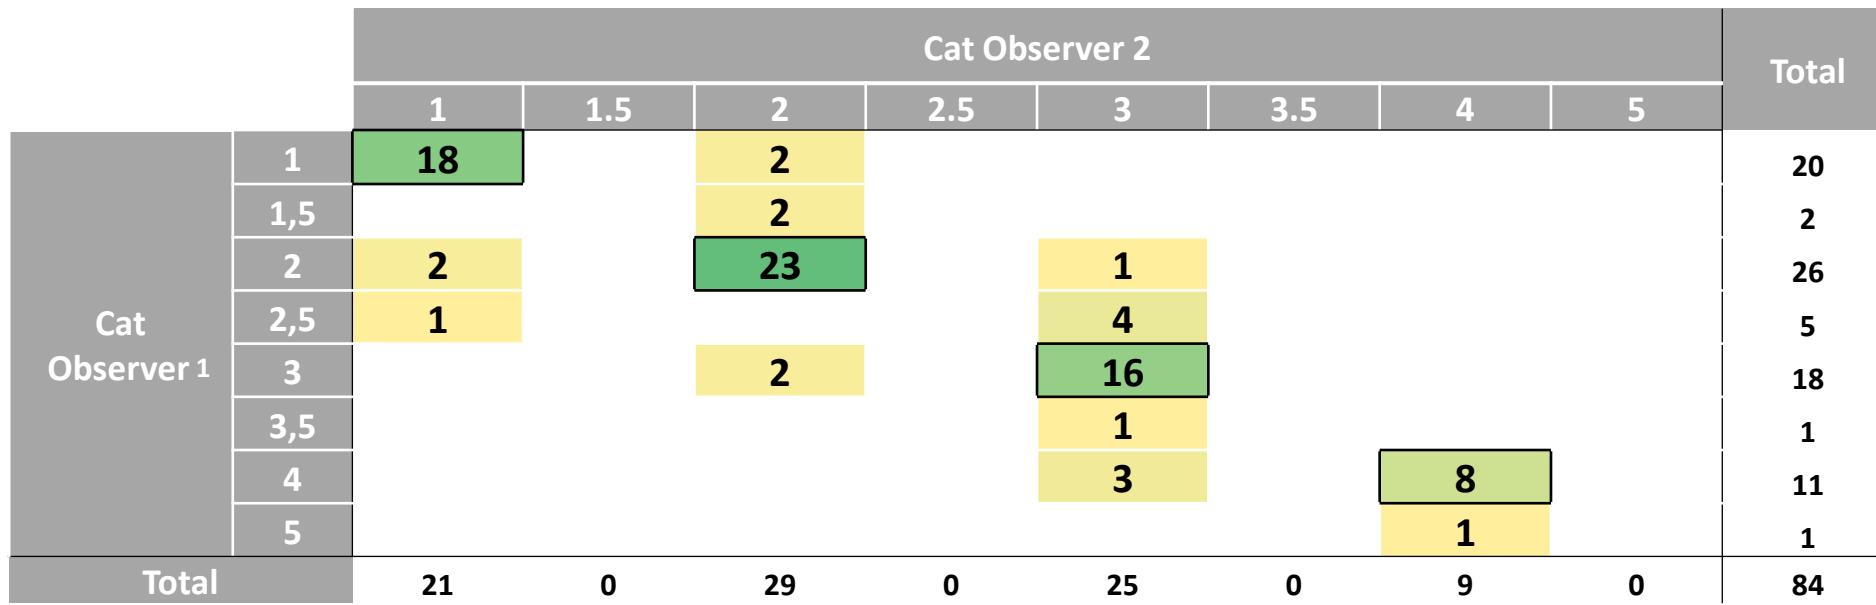

| FS | Fixed effect             |       | Solution |
|----|--------------------------|-------|----------|
|    | Age                      |       | -0,005   |
|    | Observer_Reference Obs_1 | Obs_2 | 0,060    |
|    | Group_Reference G1       | G2    | 0,737    |
|    |                          | G3    | 0,564    |

Contingency matrix

|                   |     | Cat Observer 2 |     |    |    |   | Total |
|-------------------|-----|----------------|-----|----|----|---|-------|
|                   |     | 1              | 1,5 | 2  | 3  | 4 |       |
| Cat<br>Observer 1 | 1   | 26             |     | 2  |    |   | 28    |
|                   | 1,5 |                |     | 2  | 1  |   | 3     |
|                   | 2   | 2              |     | 34 | 3  |   | 39    |
|                   | 3   |                |     |    | 12 |   | 12    |
|                   | 4   |                |     |    | 1  | 1 | 2     |
| Total             |     | 28             | 0   | 38 | 17 | 1 | 84    |

# Solutions

| RS | Fixed effect             |       | Solution |
|----|--------------------------|-------|----------|
|    | Age                      |       | 0,000    |
|    | Observer_Reference Obs_1 | Obs_2 | -0,017   |
|    | Group_Reference G1       | G2    | 0,028    |
|    |                          | G3    | -0,188   |

# Conclusions

- We do not know if low repeatabilities are due to the procedure in itself or caused by changes in the process of dealing with stress of the animals when they are exposed several times to the same management/stressor.
- Now, we are recording additional information to assess the value of these indicator traits as proxies of temperament.
