

Arrival of the washable vial RFID to the French milk control

Le Contrôle Laitier

Why the Washable Vial RFID?

- LactoCorder and EMM in strong development
- Automation of the IT processing
- Traceability of samples
- Management of Vials (Less Vials)
- Management of Tags (less Tag)
- Wash of Vial in laboratories
- Return of investment

Starting up of the project in June, 2008

Characteristic of Vial

Recommendation of France Milk quality control test

- Counts of wash min 60 times
- Resistance in the temperature
- In complete capsule sealing of the Tag
 - Waterproofness
 - completes Integration of the Tag HF LF and Glass Tag
- 2 Models 40 ML and 50 ML
- Compatible robot Ilas

Manufacturing of the first Vial in January 2009

The Washable Vial

- 1 Body of the Vial
- 2 the Tag
- 3 Shutter

The assembly of the shutter makes by weld Ultrasonounds on edges directly assuring a complete waterproofness

Test

- Test of wash OK
- Test Robot Ilas OK
- Test current ground with 2000 vials

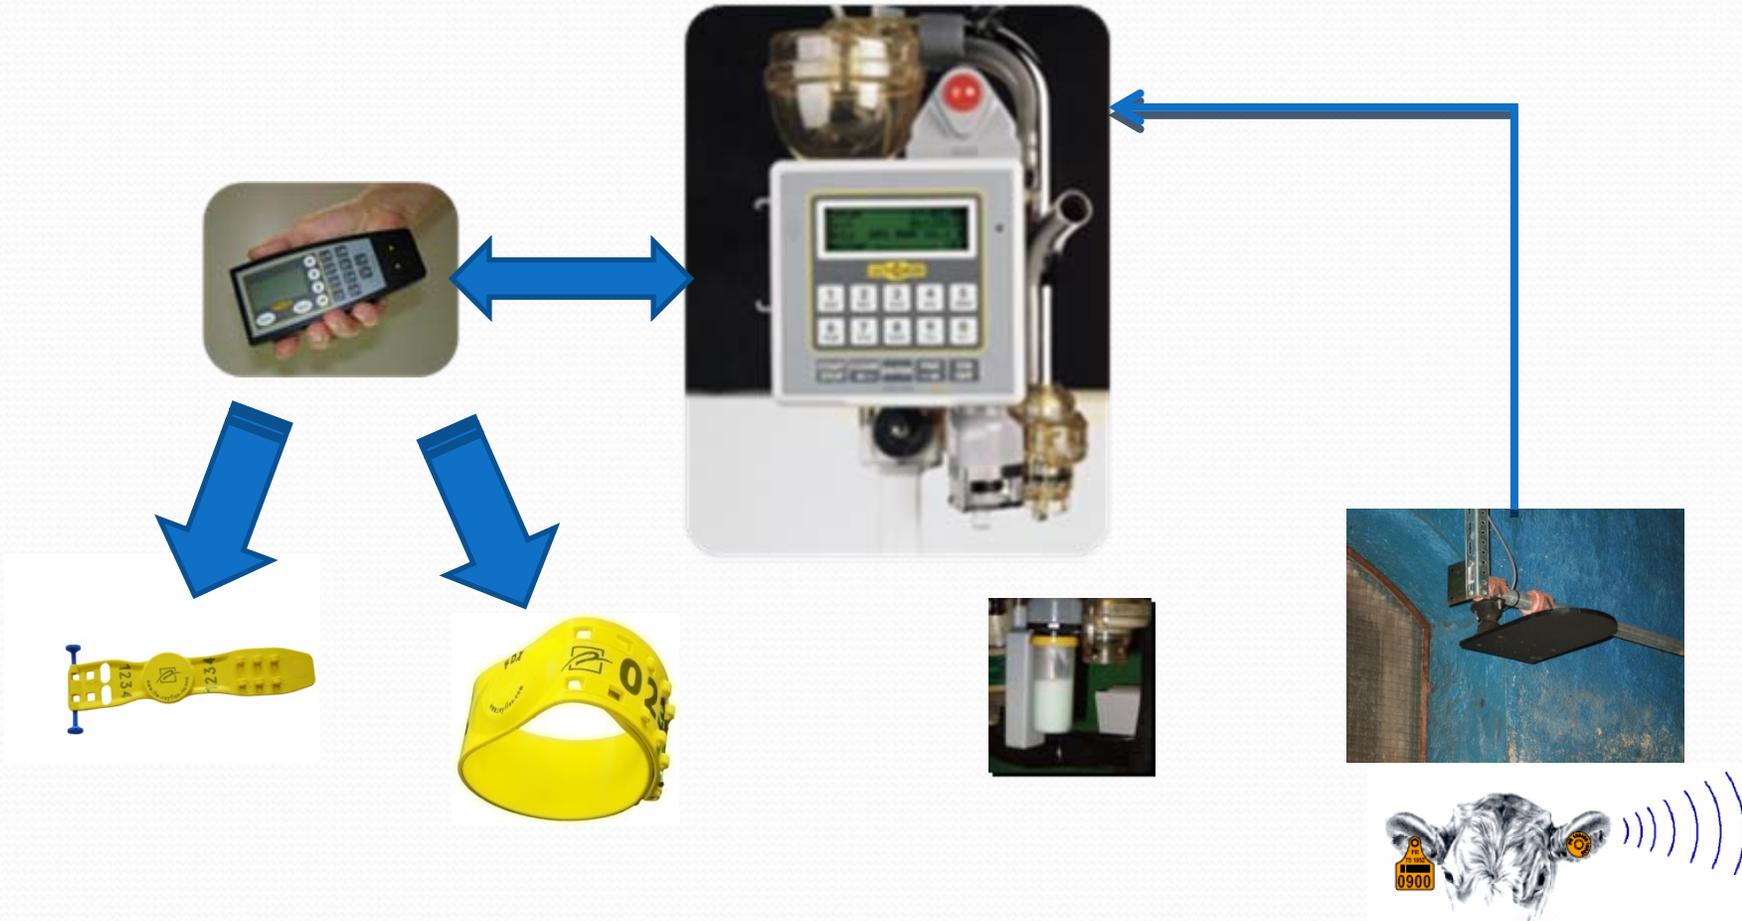

Objective

- Mould of production 4 imprints for 40 ML and 50ML
- Production 100 000 pieces for November, 2009

Tools to use the Vial

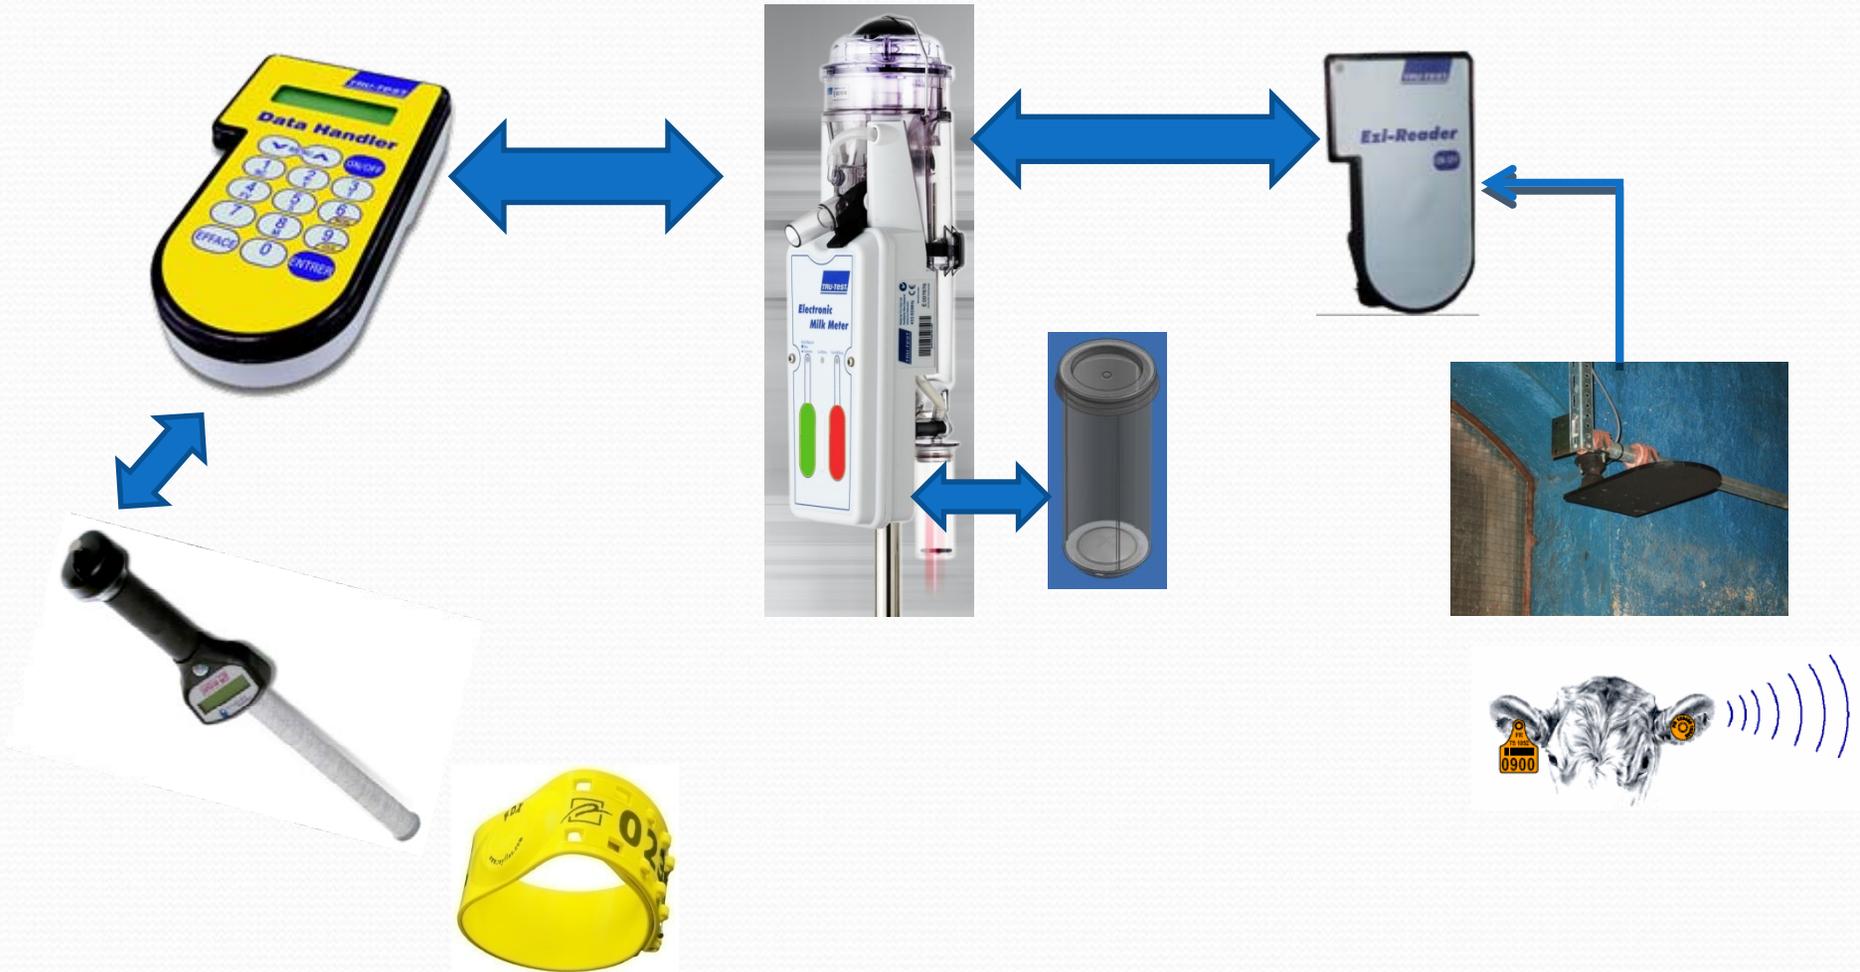

- Portable Electronic Milk Meter
 - LactoCorder
 - TTEMM
- Manual recorder WMB TT with recording of the Vial
 - EZITAG of TruTest
 - COMMANDER of WMB (available September 2009)

Lactoborder and Commander

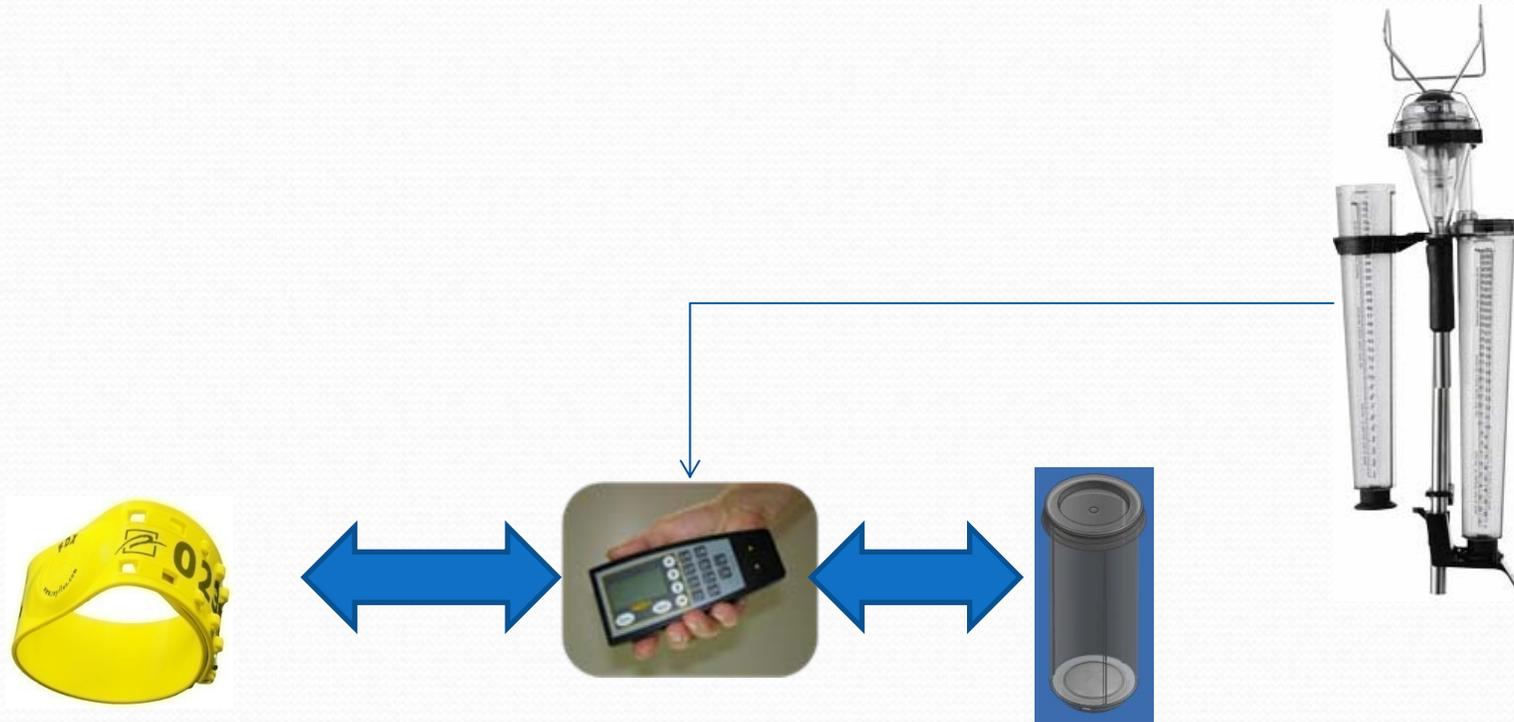

Automatic identification

RFID and Data Handler

Automatic identification

Manual Recorder. COMMANDER

- Manual entry Weight of milk
- Reader of Vial RFID
- Reader of Anklet or Manual Identification

Manual Recorder: EZITAG

- Manual entry Weight of milk
- Read/Write of Vial RFID
- Auto or Manual Identification

Solution For OCL

1st Step Integration of washable Vial RFID
to begin the wash on the laboratory

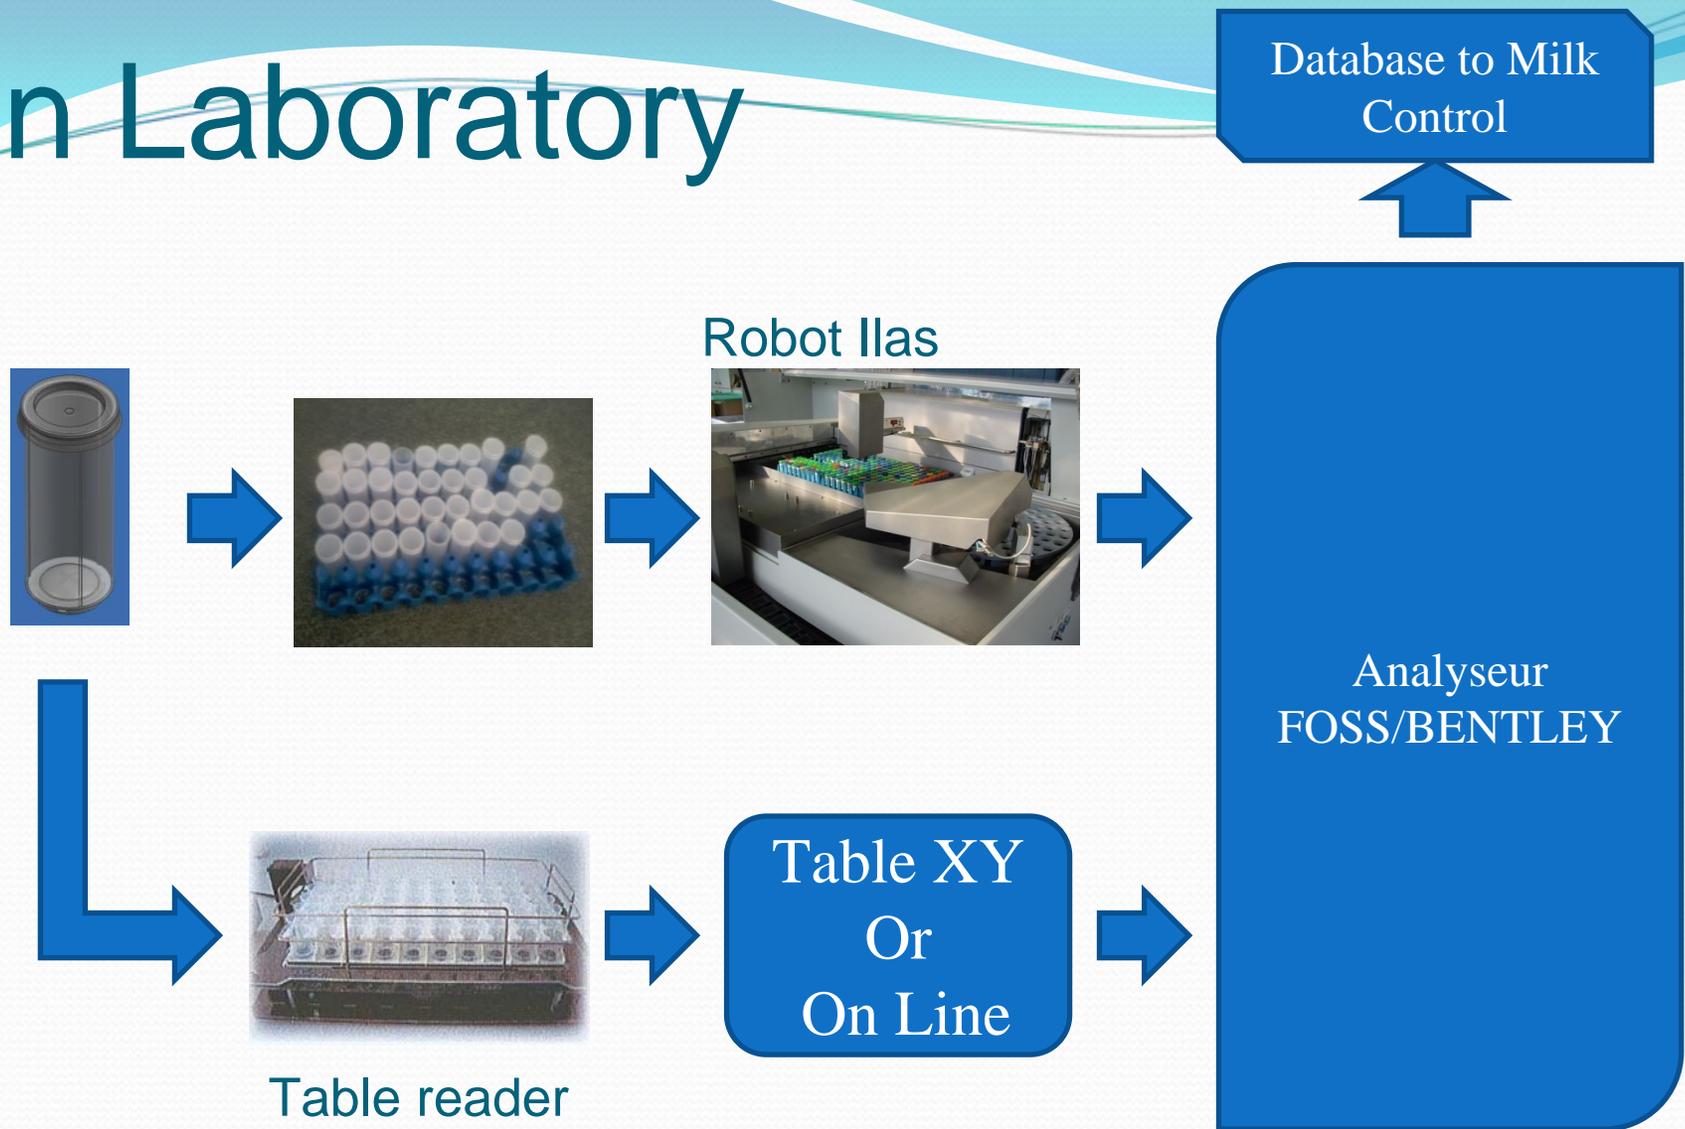

2eme Step To spread

The Electronic Portable Milk Meter around 10%
(Every year 10 % in more)

Manual Recorder 90 %

Assure a traceability 100 %, in the course of time

In Laboratory

Many Thanks
for your Attention
